

## Module 7 Guideline Lesson 2

---

Patient was brought into the ER for injuries. She had been crossing at the crosswalk when a car ran a red light. She was hit in the abdomen by the side mirror and the tire ran over her right foot. Which **transport accident definition** will describe our **patient**? (Read all definitions in Chapter 20 of the coding manual.)

(e) pedestrian  
Correct

(f) driver

(g) passenger

(h) person on the outside

---

Upon exam, the patient has a *contusion of the abdomen* and a *crush injury to the right foot*. The patient was taken to surgery for bone reconstruction in the foot. According to guidelines learned, what is the proper sequence for this initial encounter?

S97.81XA, V03.90XA, S30.1XXD

S97.81XA, S30.1XXA, V03.90XA  
Correct  
Guideline I.C.19.b indicates the most serious injury is sequenced first.

S30.1XXA, S97.81XD, V03.90XD

S30.1XXA, S97.81XA, V03.90XA

---

What additional external cause code could be applied if the patient was on their cell phone watching TikTok at the time of the accident? (HINT: review the information and notations found prior to the transport definitions in Chapter 20)

Correct answer 1 - Y93.C2

Incorrect

The "use additional" code notation with the transport accident definitions provides guidance for use of cell phones at the time of the accident.

---

Liam was riding his motorcycle in excess of the speed limit when he lost control on a road striking a road sign. He was seen in the ED however, no injuries were sustained. Select and or all **external cause code(s)** submitted for the encounter. (Review in the external cause index.)

(check all that apply)
