

## NR305 Week 2 iHuman Nurse Notes Template

### Directions:

1. Read all directions on the NR305 Week 2 assignment directions page.
2. Complete the Week 2 Wellness Assessment: Luciana Gonzalez case in iHuman before completing this template.
3. Submit the iHuman case for grading by iHuman. (You may submit 2 attempts before the deadline.)
4. Do not delete any of the content/questions currently on this template.
5. Answer each item below. Read the directions carefully in each question and answer them fully. Reminder: You can refer back to the iHuman case as needed to help you complete this template.
6. Submit the completed template on the Week 2 assignment page. (Your instructor will grade the Nurse Notes and provide feedback in the grading comments.)
7. Please check for proper grammar and spelling prior to submission as this is part of the rubric.

### Complete each item below:

1. Write an SBAR note (Situation, Background, Assessment, Recommendations) to summarize this assessment. Hint: Since this is a wellness assessment your summary should include a comprehensive, but brief, review of all of your findings, not only abnormal results. To develop your note, **type the appropriate information after each letter below.**

S – Luciana Gonzalez presented today for a comprehensive health assessment in order to apply for life insurance at her job.

B – Pt complaining of urinary frequency, pain, and discomfort. Pt states these symptoms started a few days ago, and pt has had these symptoms in the past. She denies any allergies and doesn't take any medication. Luciana denies alcohol, smoking, and drug use.

A – Pt with nevus on the right side of the face. Stable vital signs. A&O x4. Ht: 5'4". Wt: 185 lbs. BP: 124/82. Resp: 22 non-labored. SpO2: 98% room air. Temp 98.8 F. Luciana states she has pain (2/10) and discomfort during urinating. Urine is normal in color, no blood, no pus, no kidney stones present. Urinalysis indicates bacteriuria.

R – I would advise adequate fluids to dilute the urine and flush out bacteria. I would also suggest the patient wipe front to back to prevent the transmission of bacteria. Finally, I
