from **Week 3: Discussion: Debriefing of the Week 2 iHuman Wellness Assignment (Graded)**

██████████

Paragraph 1:

It went well pointing out the patients UTI symptoms, aside from the testing results. she complained she had urinary frequency and pain. those symptoms and test results confirmed my knowledge. I also knew she was going to get a Urine analysis/ culture and send home with some antibiotics. I like Ihuman because it mimics a real person with sounds and having a dialogue with a patient.

Paragraph 2:

I would ask more question pertaining to her hygiene and sexual life. I wish that Ihuman would give more questions pertaining to the problem the patient is having. so we can go more in depth with the situation. its a broad questionnaire. Yes i was surprised of the feedback i got. I always think very deep into a problem when it can just be something simple for instance, i picked a referral to see a cardiologist because she had the nevus mark in her face. Normally that is linked to a cardiologist like a strawberry birthmark. I also, think we should be able to educate patient and we can't do that with ihuman.

Paragraph 3:

I like how we can interact with the patient as in real life using the ID identifiers such as name and DOB. It reinforces my knowledge as far as asking the correct question to the patient when they come in with a certain situation. I wish they would give us a better background and more information to the patient. The information provided is broad and the questions as well.
