

Week 8 Discussion: The Evidence-Nursing Practice Connection

Discussion Questions

Improving patient care and outcomes is paramount to the practice of nursing. As we conclude our learning journey through our world of research and evidence-based practice, it is important to reflect upon your time spent in the course:

- Think about nursing practice and describe one barrier that you think prohibits nurses from engaging in EBP; share one strategy you could use to facilitate the use of evidence to help improve nursing care for patients.
- Describe how your thinking has changed about nursing research and evidence-based practice over the past 8 weeks; describe one new learned item during this course that you believe was the most helpful.
