Analyzing Cues: Water Crisis

Public health data in three zip codes of a mid-sized rural city revealed unexplained weight loss, premature births, developmental delays, learning difficulties, and memory impairment. A local community health organization is collaborating with the public health department to investigate the cause of these findings.

For each assessment finding in the left column, click to specify if the finding is associated with a disease process. Each finding may support more than one disease process.

Assessment Finding	Associated Disease Process
Unexplained weight loss	
Premature births	
Abdominal pain	
Memory impairment	
Developmental delays	
Vomiting
