

Hello Professor & class,

This week's reading, I learned about the triad of evidence-based practice. It deals with scientific evidence that is discovered through various experiments and studies. Client experiences, this is where experts share best practices and client stories. Patient preferences is where client preferences are reviewed. Finding the right balance is considered critical to practicing good medicine (Schlegl, 2017).

Schlegl E. (2017). *Different weights of the evidence-based medicine triad in regulatory, health technology assessment, and clinical decision*. *Pharmaceutical Med.* 31(4): 213-216. Doi: 10.1007/s40290-017-0197-3
