

Evidence Based Practice

Tips:

- Questions may be out of order
- Only the answers provided

## Data Collection

1) **Primary** data is collected from the participants by the research team. **Secondary** data is collected for another purpose and used by the researcher for the purpose of a study.

2)

- Interview
- Electronic survey
- Physiologic measurement
- Paper survey

3)

- Healthcare organization quality data
- Electronic health record
- Publicly reported patient satisfaction survey data
- Governmental databases

4) Design forms

5)

Primary Data	Secondary Data
Blood pressure measurements collected manually by the research team	Blood pressure measurements collected from the electronic medical record
Survey responses completed via electronic software	Rates of hospital-acquired infections collected from public databases
Interview responses collected via face-to-face interviews	

6) Match each survey question example with the survey question type.

- How would you rate client safety when care is delegated? **Scale**
- Do you delegate client care to other staff members? **Dichotomous**
- What has been your experience in delegating client care to other staff members? **Open-ended**
- To which staff members do you delegate care? **Forced choice**

7) Electronic survey
