1. What is your job? Can you describe a typical day?

2. What was the biggest epiphany or "AHA" moment that you've had since working

in informatics?

3. How do keep up with the trends in technology/informatics?

4. Share an example of when you went above and beyond the "call of duty."

5. How do you function as a member of interdisciplinary and interprofessional collaboration?

6. How are you a leader? A decision-maker?

7. The *Nursing Informatics: Scope and Standards of Practice* identified the following

function areas:

> i.   administration, leadership, and management
>
> ii. system analysis and design
>
> iii. compliance and integrity management
>
> iv. consultation
>
> v.   coordination, facilitation, and integration
>
> vi. development of resources, products and systems
>
> vii. educational and professional development
>
> viii. genetics and genomics
>
> ix. information management/operational architecture
>
> x.   policy development and advocacy
>
> xi. quality and performance improvement
>
> xii. research and evaluation
>
> xiii. safety, security, and environmental health

> b. Which of these functional roles do you practice?
>
> c. Of these functional roles, what best matched your aspirations for practicing
>
> nursing informatics?

8. Do you have any future goals?
