Week 1 quiz

Hello NR546 students,

In order to provide feedback on the weekly quizzes, I will provide rationale statements for the quiz questions. You will note that there are more than 5 listed this is because the quiz testbank is larger than 5 questions and the additional information can help you prepare for the final and direct your study.

- The amygdala is associated with anxiety and perception of odors.
- The hippocampus is involved in memory and anxiety. The amygdala is associated with anxiety and perception of odors. The prefrontal cortex is associated with executive function. The thalamus is associated with motor command processing
- The client's cognitive status can result in an ethical concern if the client is unable to self-determine care or is a danger to self or others. Ability to pay is not an ethical issue.
- basal ganglia are a group of structures involved in voluntary motor movements. Basal ganglia are also involved in cognition and emotion.
