

## Question 1

0 / 0 pts

I understand the value of doing my own work and learning the skills needed to support my future independent practice as a nurse practitioner. I understand that while there may be opportunities beyond my faculty's control for me to collaborate or share answers with peers, that it would not benefit my own personal and professional growth to do so. I agree to do my own work and take personal responsibility for my learning.

I do

I do not

Thank you for acknowledging your personal responsibility for your learning and professional practice while acting with honesty and integrity.

## Question 2

4 / 4 pts

If a patient is taking Bactrim and their creatinine clearance falls below 15 mL/min, what should the provider do?

Have patient continue the medication until it is complete.

It depends on how many doses the patient has taken.

Stop the drug immediately.

List the drug as an allergy and instruct the patient to stop taking it immediately.

Rationale: If creatinine clearance falls below 15 mL/min when taking Trimethoprim/Sulfamethoxazole (Bactrim), the drug use must be discontinued. This is covered on page 694 of your course textbook.
