Navigating iHuman in NR601 and Helpful Hints

All Sections

No unread replies.No replies.

Hello class.   the announcement below was sent to professors to post in your assigned section during preview week. I am re-posting it here as it looks like it is not in the cafe announcement. Please pay close attention the to DDx section that is highlight in red. I also recommend you listen to the recording link.

Hi Class,

please click on the link below for a brief overview on navigating iHuman https://lms.courselearn.net/lms/video/player.html?video=1_h813d1rh (Links to an external site.)

During preview week, please take time to complete the practice case in ihuman. The practice case name is: **William F Montgomery**. This case allows you 5 attempts in learning mode and 5 attempts in testing mode. I highly recommend you practice this case before you attempt any of the graded cases (worth 75 points - weeks 1, 2, 5, 6, & 7)

You will see that testing mode with the Montgomery case does not provide answers or feedback. The purpose of the practice case is to allow you the opportunity to do the following: practice navigating ihuman, get use to asking appropriate focused type assessment questions, practice a focused exam, work on DDx and required testing before you attempt a graded case. As you work through the ihuman cases this session, you may need to reflect back on NR509 (Advance Physical Assessment). This ihuman cases are not comprehensive. They are focused assessment.

HINTS:

- **Important:** Refer to the rubric on how you will be graded before you start any iHuman case. For DDx - let your history and physical exam guide you in
  determining your list of DDx. Remember to clinical reason/critical think with yourself as to why you selected the DDx. Do not focus on the iHuman hints...
  These do not help you in terms of your final score. The hints can actually make your grade worst as students start to focus to much on ihuman hints which may not align with the rubric.
- For the required tests/exams. let your DDx guide you in determining which test/labs to order. For each DDx you select based on #1, you should have an appropriate diagnostic/lab to help you rule in or out the DDx.
