

Week 1 Discussion 1: Integration of Nursing Informatics Skills and Competencies

56 unread replies. 56 replies.

Reflect on your own practice. Discuss how informatics is used in your practice. What is your primary area where you would use informatics? From completing the Pre-TANIC TIGER assessment for this week, what do you plan to achieve in this course? How did you feel your competency level was compared to the assessment?

Hello Class

Informatics is used every day in nursing, and in learning. And with the evolution of technology almost everything is accessible online. With digital learning the student can follow lectures whenever it is most convenient. Other advantages include that it is a flexible type of learning that can create and foster social, meaningful interactions with others where knowledge continuously grows. Distance education also allows for, a so-called borderless learning experience, and mobility for students which adds an important dimension (Georsson, 2019). In my job I use informatics every day to chart in the patients' health records, to conduct shift reports, and to creating spreadsheets to track staff performance when it comes to performing EKG and patients that arrive complaining of chest pain. Keeping track helped improve patients'
