## Question 1

1 / 1 pts

A patient with symptomatic Aortic Stenosis (AS) requires surgery due to severe symptoms. The patient has several comorbidities and is deemed to have prohibitive surgical risks. Despite this risk stratification and due to the severity of the symptoms this patient may be a candidate for the following intervention:

Aortic Valve Replacement (AVR)

Transcatheter Aortic Valve Replacement (TAVR)

Either an AVR or TAVR

This patient is not a surgical candidate

Correct!
