

Topic 5 DQ 2

Assessment Description

According to the textbook, nurses in various settings are adopting a research-based (or evidence-based) practice that incorporates research findings into their decisions and interactions with patients. Analyze the role nurses play in improving health care quality and safety through the use of evidence-based practice (EBP). How do you see this role being applied in your workplace? What internal stakeholder perspectives would you need to consider, including stakeholder support, in order to successfully implement an EBP project in your workplace?

Initial discussion question posts should be a minimum of 200 words and include at least two references cited using APA format. Responses to peers or faculty should be 100-150 words and include one reference. Refer to "RN-BSN Discussion Question Rubric" and "RN-BSN Participation Rubric" located in Class Resources, to understand the expectations for initial discussion question posts and participation posts, respectively.

Nurses: Decisions and Interactions with Patients

Evidence-based practiced helps to improve patient outcomes and especially lower healthcare costs. EBP also have scientifically proven evidence for delivering quality health care
