

Topic 6 DQ 1

Review the evidence-based practice project ideas you described in Topic 5 DQ 1. Based on your initial ideas, what types of scholarly nursing research (such as quantitative or qualitative research, peer-reviewed resources, etc.) would be required to further investigate the issue? Select an article related to your topic. Identify the criteria you would use based on the CRAAP test to evaluate the appropriateness of the research. Why is it important to select research that meets these criteria? Evaluate the "CRAAP Test" article from the New Jersey Institute of Technology Library, located in the topic Resources. Explain the five criteria as they relate to your selected article.
