📌 Question 1

Darian is a 14-year-old adolescent who states his right testicle has a soft swollen mass. The testicle is not painful upon palpation. The right inguinal canal is without masses. The mass does transilluminate with a penlight. This collection of symptoms is consistent with:

Selected Answer: hydrocele

📌 Question 2

One of the most important aspects to consider in the orthopedic screening examination is:

Selected Answer: symmetry.

📌 Question 3

When assessing a 17-year-old for nuchal rigidity, you gently raise his head off the examination table. He involuntarily flexes his hips and knees. To confirm your suspicions associated with this positive test, you would also perform a test for the _____ sign.
